

Dr. Robert Sevenich

Dr. Robert Sevenich is currently a research fellow at the Department of food biotechnology and food process engineering of the Technische Universität Berlin, where he received his PhD in February 2016 with the topic "High pressure at ambient and high temperatures and its influence on food processing contaminants, food borne pathogens and bacterial spores in model-and real food systems". His focus is on high pressure processing and its influence on vegetative microorganisms, spores and food processing contaminants in model and real-food systems. Other fields of interest are pulsed electric field as well as ultrasound treatments of foods and concentration of juices via CO₂-gashydrates. Robert has written many peer-reviewed papers, worked on several European projects, has given numerous presentation and received many international awards.
